RESPONSIBLE INVESTING KEY CHARACTERISTICS

RESPONSIBLE INVESTMENT APPROACH

In line with the overall fund objective, the fund targets investment in strategies which help contribute to achieving its sustainability goals.

This involves selecting strategies which exclude or reduce exposure to companies with poorer sustainability characteristics and increasing exposure to companies with better sustainability characteristics. Sustainability characteristics are also considered in the selection of property and alternative funds.

ESG RISK RATING

The Environmental, Social & Governance (ESG) Risk Rating measures the degree to which a company's economic value is at risk due to not considering ESG factors using a calculation of the company's unmanaged ESG risks.

*A lower score indicates a lower level of unmanaged ESG risk and potential risk to the economic value.

Sustainalytics' ESG Risk Ratings measure a company's exposure to industry-specific material ESG risks and how well a company is managing those risks. This multi-dimensional way of measuring ESG risk combines the concepts of management and exposure to arrive at an absolute assessment of ESG risk. Sustainalytics identifies five categories of ESG risk severity that could impact a company's enterprise value.

Negligible	Low	Medium	High	Severe
0 - 10	10 - 20	20 - 30	30 - 40	40+

CARBON INTENSITY

Carbon intensity is a metric used to compare company emissions across industries. The absolute emissions is divided by total earnings with the figure expressed in tonnes of carbon dioxide equivalent per million USD of total revenue.

FOSSIL FUEL

Fossil Fuel Involvement measures the percentage of earnings that companies get from thermal coal extraction, coal-based power generation, oil and gas production, oil and gas based power generation, and oil and gas related products and services.

Note on Calculation of Sustainability Characteristics:

ESG metrics data sourced from Sustainalytics (Powered by Sustainalytics).

ESG risk scores and carbon metrics are currently calculated for Shares and Corporate Bonds only which represent 52.5% of the total portfolio. This reflects the majority (but potentially not all) of the Global Shares and Corporate Bonds in the portfolio.
